Cecil College • Elkton Station • Room 221
107 Railroad Ave, Elkton, MD

Coffee and pastries will be provided.
Please RSVP to rharten@cecil.edu or 443-907-1379.

As 2016 approaches and the baby boomer generation moves out of the Workforce, it will only get harder to find those employees who are best qualified to fill the employment gaps which drive improvements for your bottom line.

Why Apprenticeships?

- Cecil College will partner with the IEC Chesapeake program which offers a combination of hands on and OTJ over a four year period.
- The college will house a hands on lab to be used for the classroom portion of the training.
- IEC Chesapeake offers state and federally recognized programs in Electrical, VDV/Low voltage, and HVAC-R.
- There will be a 23 percent growth in the electrical industry, according to the Bureau of Labor Statistics. Baby boomers will retire and younger workers will need to be trained to fill the gaps in construction.
- The program includes training in solar and renewable energies.
- When program is complete, the student will earn their Journeyman's license. Many electricians go on to earn a Masters license.
