Subject: News and Info September 2020

To Electric League Members and Friends:

This has been a year of unusual events that affect businesses and personal lives. Your ELM leaders have decided to move all membership renewals (and even new memberships for those wishing to join for the first time) to begin on January 1, 2021.

This decision will give everyone some extra time to recover from the stresses of the past few months and allow the League to start fresh in 2021 with accounting for all of our memberships. You will receive information in December about how to renew your \$35 membership with us.

For those organizations and individuals who would consider being a sponsoring organization with some added benefits, please contact President Pete Elmo peter.elmo2@aol.com to receive information on cost and benefits of being an ELM sponsor.

with another important consideration ...*

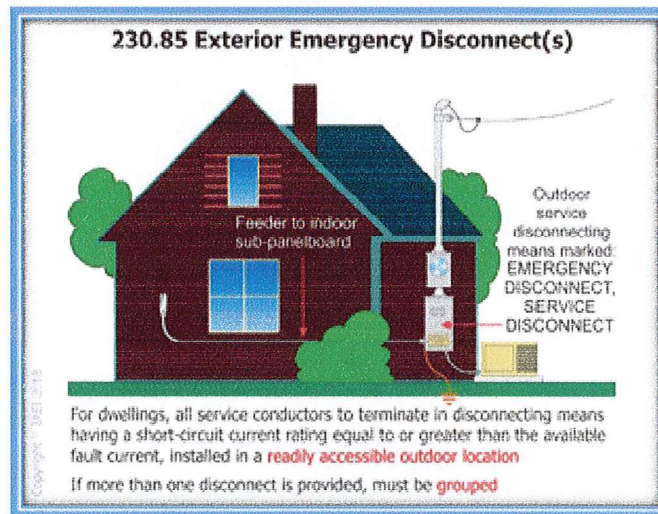

An Exelon Company

Some Things to Think About ...

Did you know that our own BGE utility is a progressive participant in a group working on a sensible solution to providing safety to first responders? Several servicing utilities are trying to develop a meter that contains a disconnecting means that will disconnect the power to dwelling units. It will help in small, contained spaces and always be located where the local power is provided. **(See illustration below.)**

Of course, if it is just a disconnection switch, then interrupting capacity must be taken into consideration as well as the proper label and delivery of equipment enclosure, and making sure other disconnecting means (solar, generator, etc.) can be grouped at that location.

Isn't it enlightening that consideration for safety, ease of installation, and assistance in easing the expenses to the public are being worked on by a great company such as BGE? BGE will keep us informed as solutions are ironed out.

Subject: More graphics

Gil,

I received permission from Paul Abernathy for his graphics. All he asks is notice the copyright of each graphic. If one of hi graphics does not have a copyright, let's give him credit for the graphic(s)- (Paul Abernathy, The Electrical Code Academy)

2020 NEC® Change - 110.22(A) Identification of Disconnecting Means

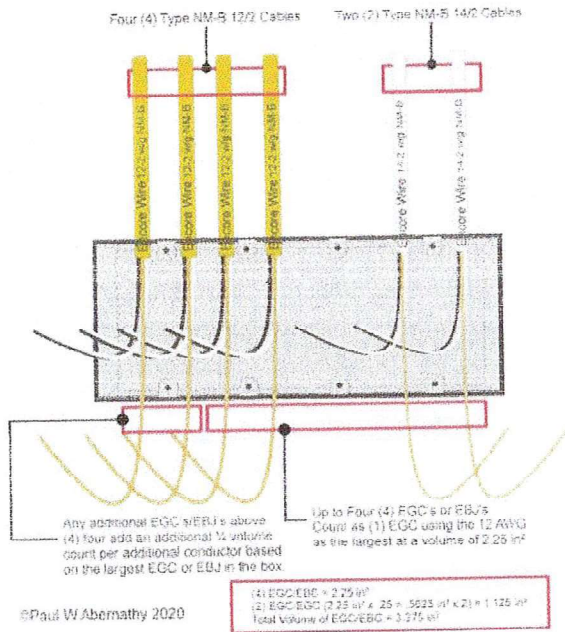

110.22(A) General.

Section 110.22(A) requires that all disconnecting means be marked in a legible manner to indicate its purpose. However, if the disconnect is arranged and located in a fashion that its purpose is evident the marking is not required.

Also, the section now states that in other than one- or two-family dwellings, additional marking rules now require the installer to include the identification of the circuit source supplying the disconnecting means. Lastly, it is made abundantly clear that all markings mentioned in this section are to be of sufficient durability to withstand the environment involved.
